

Edge pressing/ Crusher

A convenient, very quick tool for precise pressing previously folded bend in single working cycle. Perfect for aesthetic finishing of eaves and drops. It shuts the bend leaving a tear-shape, it doesn't break the plate and damage the surface. The working element is a cascade located set of four shaping rollers system which increases the metal plate pressing gradually. The last system with regulated gap breadth allows to adjust the tool to plates of various sheet gauges ensuring, at the same time, required precision.
